Donetsk State Technical University (DONNTU)

Building Engineering including computer science and programming

Covering letter

Hello! My name is Igor, and I am junior full-stack web developer from Kiryat-Byalik (Haifa), with just a year of experience. I am only for two years living in Israel, and all this time I was actually learning hebrew, and increasing my knowledge in JS, React, Nodejs, etc. And I really set myself the goal of being a software engineer at big IT company that builds products, solutions and technologies to empower every person and organization on the planet to achieve more and to make the world a better place. I am looking for company to develop new features and components to learn how to make products more powerful and up-to-speed with the latest challenges. I really wish to work with cutting edge technologies and collaborate with top notch people solve. I really want to feel that my efforts on the design, development, and testing of next-generation applications will have an impact on millions of people.

I do my best to achieve high-quality theoretical and practical skills, and without experience in a large company and a strong team - time is wasting.

And if you can give me the opportunity to work in your company as a junior developer, then I will do my best to bring the quality of the product to a new level.

If this sounds good to you, I would really hope to come join your team, and find more than just a job.
